## ANSWER KEY: Solid Rocket Boosters

## Directions

Complete the following activities using the solid rocket booster information sheet.

## Your Mission:

Your launch team needs the missing information to complete the launch. Find the key terms or numbers and accurately fill in each blank.

1. Each booster rocket is attached to either side of the external $\operatorname{tank}(E T)$ and is $\mathbf{1 4 9 . 1 6}$ feet ( $\mathbf{4 5 . 4 6}$ meters) tall with a diameter of $\mathbf{1 2 . 1 7}$ feet ( $\mathbf{3 . 7}$ meters). Each SRB weighs approximately 1,300,000 pounds (589,670 kilograms) at launch with roughly 85 percent being the weight of the solid fuel itself.
2. The solid rocket boosters (SRB) operate in parallel with the main engines for the first two minutes of flight to provide the additional thrust needed for the orbiter to escape the gravitational pull of the Earth. At an altitude of approximately $\mathbf{4 5} \mathrm{km}$ ( $\mathbf{2 4}$ nautical miles), the boosters separate from the orbiter/external tank, descend on parachutes, and land in the Atlantic Ocean.
3. In addition to the solid rocket motor, the booster contains the structural, thrust vector control, separation, recovery, and electrical and instrumentation subsystems.
4. The two SRBs provide $\mathbf{7 1 . 4}$ percent of the main thrust needed to lift the Space Shuttle off the launch pad. Each booster has a thrust of approximately $\mathbf{3 , 3 0 0 , 0 0 0}$ pounds ( $\mathbf{1 4 , 6 8 5}$ kilonewtons) at launch and help lift the Shuttle up to an altitude of about 150,000 feet, or 28 miles ( $\mathbf{5 0}$ kilometers).
5. The solid fuel, or propellant, is a mixture of ammonium perchlorate, aluminum, and iron oxide.

## Your Mission:

Write these statistics in scientific notation. Don't forget to label your units. The first one is done for you.

| Booster Statistic | Write the number without the placeholding zeros | Place the decimal point after the first digit | Count the number o places you moved the decimal point | Write the number in scientific notation |
| :---: | :---: | :---: | :---: | :---: |
| Thrust at lift-off $1,202,000 \mathrm{~kg}$ | 1202 | 1.202 | 1.202000 | $1.202 \times 10^{6} \mathrm{~kg}$ |
| Propellant Weight $502,000 \mathrm{~kg}$ | 502 | 5.02 | 5.02000 | $5.02 \times 10^{5} \mathrm{~kg}$ |
| Gross weight $589,700 \mathrm{~kg}$ | 5897 | 5.897 | 5.89700 | $5.897 \times 10^{5} \mathrm{~kg}$ |
| Gross weight 1,300,000 lb | 13 | 1.3 | 1.300000 | $1.3 \times 10^{6} \mathrm{lb}$ |
| Thrust of both boosters 5,300,000 lb | 53 | 5.3 | 5.300000 | $5.3 \times 10^{6} \mathrm{lb}$ |

## Your Mission:

Label the orbiter parts below.
